TSCA Inventory Reset Rule

Jun.29.2017

Last week EPA issued the pre-publication version of its much-anticipated final TSCA Inventory re-set rule. Because the new regulation affects every company that manufactures, imports, or processes chemical substances in the U.S., a wide swath of industry will be impacted by the rule including almost every company in the manufacturing sector. The main purpose of the Inventory Reset rule is to provide EPA with a clear picture of all chemical substances that are active in commerce in the U.S. To accomplish this, the rule establishes both “retrospective” and “forward-looking” reporting requirements for manufacturers, importers and processors of chemical substances that are listed on the TSCA Inventory. These designations are key—a substance designated as inactive can no longer be manufactured or processed in the U.S. until the certain reporting requirements are satisfied. [Click here](#) for more information on how your company may be affected by the rule and to identify specific steps you can take to minimize disruption caused by the rule. For more information, please contact the professional(s) listed below, or your regular Crowell & Moring contact.
